Chapter 20

Human Resource Management and Sustainable Tourism Development:

A Conceptual Analysis from an Academic Perspective

ABSTRACT

Research on human resource management (HRM) practices and sustainable development has increased in the tourism management literature over recent decades. Scholars suggest that commitment-based HRM practices contribute to the sustainability of the firm; however, prior research puts little emphasis on the conceptual relationship between sustainable tourism development and commitment based HRM practices. This chapter opens the black box by examining the role and contribution of HRM in achieving sustainable tourism development in India. The findings of the study suggests that the new HR competencies required for achievement of sustainable tourism development and the applicability of HRM pervades every aspect of doing business and needs to be embedded across an organizational all levels, becoming an ongoing change process. Subsequently, tourism innovation activities enhance destination performance, emphasizing their determinant role to achieve sustainable tourism development in the digital age.

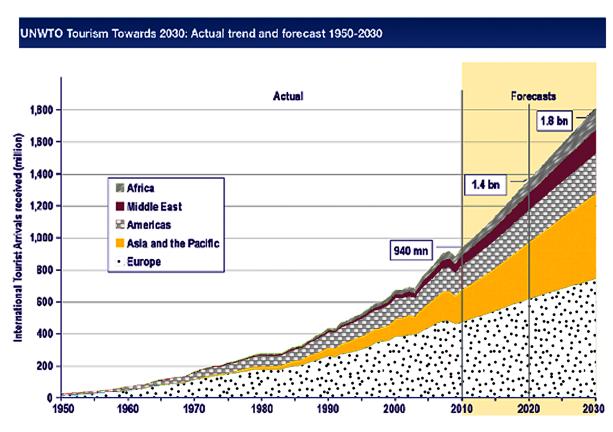

INTRODUCTION

Today, tourism industry has acquired a pivotal milestone globally as a source of earning foreign currency and generation of employment (World Tourism Organization, 2014). According to UNWTO *Tourism Towards 2030*, the number of international tourist arrivals worldwide is expected to increase by an average 3.3% a year over the period 2010 to 2030 (see. Figure 1). Over time, the rate of growth

will gradually slow, from 3.8% in 2012 to 2.9% in 2030, but on top of growing base numbers. In absolute numbers, international tourist arrivals will increase by some 43 million a year, compared with an average increase of 28 million a year during the period 1995 to 2010. At the projected pace of growth, international tourist arrivals worldwide are expected to reach 1.4 billion by 2020 and 1.8 billion by the year 2030. Interestingly, International tourist arrivals in the emerging economy destinations of Asia, Latin America, Central and Eastern Europe, Eastern Mediterranean Europe, the Middle East and Africa will grow at double the pace (+4.4% a year) of that in advanced economy destinations (+2.2% a year). This indicates that the arrivals in emerging economies are expected to exceed those in advanced economies by 2015. Further, in 2030, 57% of international arrivals will be in emerging economy destinations (versus 30% in 1980) and 43% in advanced economy destinations (versus 70% in 1980). Thus, the strongest growth will be seen in Asia and the Pacific region, where arrivals are forecast to increase by 331 million to reach 535 million in 2030 (+4.9% per year). The Middle East and Africa regions are also expected to more than double their arrivals in this period, from 61 million to 149 million and from 50 million to 134 million respectively. Europe (from 475 million to 744 million) and the Americas (from 150 million to 248 million) will grow comparatively more slowly. Ironically, this faster growth has a profound impact on the global market shares of Asia and the Pacific (to 30% in 2030, up from 22% in 2010), the Middle East (to 8%, from 6%) and Africa (to 7%, from 5%) will all increase. However, Europe (to 41%, from 51%) and the Americas (to 14%, from 16%) will experience a further decline in their share 15 more pages are available in the full version of this document, which may be purchased using the "Add to Cart" button on the publisher's webpage:
