### **ABSTRACT**

*Is it possible to enhance the learning of sociology students by staging simulated field studies in a MMOLE (massively multi-student online learning environment) modeled after successful massively multiplayer online games (MMOG) such as *Eve* and *Lineage*? Lacking such a test option, the authors adapted an existing MMOG—“*The Sims Online*”—and conducted student exercises in that virtual environment during two successive semesters. Guided by questions keyed to course objectives, the sociology students spent 10 hours observing online interactions in TSO and produced essays revealing different levels of analytical and interpretive ability. The students in an advanced course on deviance performed better than those in an introductory course, with the most detailed reports focusing on scamming, trashing, and tagging. Although there are no technical obstacles to the formation and deployment of a sociology MMOLE able to serve hundreds of thousands of students, such a venture would have to solve major financial and political problems.*

### **INTRODUCTION**

Sociology 101 is one of those ubiquitous general education courses taken annually by a million or more disinterested undergraduates who frequently cram and forget rather than form a deeply learned

ability to see their lives through the lens of the sociological perspective. Part of the problem is the large lecture and the academic preference for paper based displays of learning, both of which enfeeble sociology’s great potential for learning by doing.

As is the case with all college courses, the teaching of sociology is a loosely regulated cottage industry that lacks any national standards and is in the hands of personnel who rarely have had any formal training as instructors. It comes as no surprise that the quality of instruction is variable and inconsistent. The typical introduction to sociology is a conventional and familiar dosage of lecture, textbook reading, term paper, and written examinations—a mix that encourages short-term learning and rote repetition of the course content. The better versions feature small classes and teacher orchestrated discussions that encourage students to make connections between what they already know and what they are learning and thereby increase the likelihood of a more meaningful and enduring experience. Better yet are those classes that use simulations and other similarly engaging devices to ensure that students understand the material well enough to apply it analytically to real or fabricated social situations. Such classes are, unfortunately, in a small minority.

What to do about it? The success of online learning management systems (LMS) where students are able to “meet” and interact in cybernetic space suggests to some that we will one day see a convergence between such spaces and the much more sophisticated (from a functional and technological perspective) massively multiplayer online games (MMOG) like Lineage, Eve, and Guild Wars. With that possibility in mind, one can begin to imagine sociology courses that convene online in pedagogically designed spaces (a massively multi-student online learning environment or MMOLE) where students would spend much (if not all) of their time learning by doing.

## **WHY SOCIOLOGY?**

For those who believe a college education should have demonstrable utilitarian benefits (rather than the vague “intellectual enrichment” of late adolescents), the study of sociology is a

promising competitor for continuation in the general education requirements. Sociology studies how and why people behave as they do. It deconstructs naïve beliefs about the organization of human relations and replaces them with the ability to “see” the systematic ways that social systems distribute power and wealth and enable individual actions. Students endowed with such a vision and having to interact every day with other humans in small groups and complex bureaucracies are better able to make their social systems work for, rather than against, them. A student who is able to describe the relationship, say, between values, social status, and the reward system in a college fraternity, takes from a course on sociology benefits unavailable to a student who can define these abstract terms but not recognize them embodied in action.

Despite these formidable benefits and our high regard for them, we would not cede a permanent general education requirement to sociology. These valuable slots should be earned—through consistently excellent instruction. That is, the potential of the sociological perspective flows from what students have learned, retained, and are able to apply in their lives outside the classroom. And we have no reason today to believe that most (or even many) Sociology 101 students leave the course with its lessons secured in long-term memory.

As such, Sociology 101 is a perfect candidate for reformation as an MMOLE modeled after successful massively multiplayer online games. Immersed in such an MMOLE (one that predictably and consistently achieves a set of appropriate learning goals), students would develop their understanding of sociological principles as the result of their structured interactions within a set of simulated social scenarios. Rather than read in a textbook (or hear from a lecturer) about social mobility or the effect of gender on employment or the relation between caste and success, the student would experience, study, and have to negotiate controlled simulations of these social issues.
